Germs aerosolized for 30 minutes in a 75m³ volume test room

- With AIRsteril no germs could be measured after 10 minutes
- Demonstrated AIRsteril technology can kill over 99.99% of viruses (including Coronaviruses) from the air within minutes

Control experiment showed germs present 1 hour later. Testing performed using recognized viral surrogate, "Coliphage phiX174", confirms efficacy for other viruses (enveloped viruses, including coronaviruses)". Tests carried out by Dr. med. univ. Sebastian Werner of HygCen Germany GmbH, efficacy also verified by Dr. Stefanie Scheffler of the Fraunhofer Institute of Toxicology and Experimental Medicine.

CORONAVIRUS AND AIRSTERIL

Exert from article by Dr D Webber

Dr Webber has a background of over 45 years in microbiology

AIRsteril units have been shown to kill a wide range of microbes that are more difficult to eradicate than viruses, including bacterial species that produce endospores (*Clostridium difficile*, *Geobacillus stearothermophilus*), Gram-positive bacteria (*Staphylococcus aureus*, MRSA, *S. epidermidis*, *Listeria monocytogenes* and *L. innocua*), Gram-negative bacteria (*Escherichia coli* and *Pseudomonas aeruginosa*), and moulds (*Aspergillus fumigatus*) in both the air and/or on surfaces.

SARS-CoV-2 belongs to the same group of viruses that cause colds and influenza. The use of AIRsteril units in call centres and offices at an NHS Trust has been shown to reduce the incidence of illness-related absences; particularly reported cases of colds, coughs and influenza, as well as reducing other chest and respiratory problems.
